Task: To Implement a Class Component React Application (Profile Card)

1. Start with creating a react app using CRA (create-react-app)

2. Installing React icons Library that have Icons that can be directly imported

First web page is landing page whose design can be of your choice.

ProfileCard.jsx file

```
import React, { Component } from 'react';
import { Link } from 'react-router-dom';
import './ProfileCard.css';
import profileImage from './assets/images/Profile.jpg';
export default class ProfileCard extends Component {
  render() {
    const profile = {
      name: 'Vishal Rajesh Mahajan',
      rollNo: 'TE IT A4 Roll no 62',
      tagline: 'From Code to Career, find me everywhere as "vishalrmahajan"',
      imageUrl: profileImage,
      bannerUrl: 'https://www.vishalrmahajan.in/assets/images/banner.png',
      skills: ['Python', 'HTML', 'CSS', 'JavaScript', 'React', 'AWS', 'FastApi',
'SQL','Machine Learning'],
    };
    return (
      <div class="card-container">
        <img class="round" src={profile.imageUrl} alt="user" />
        <h3>{profile.name}</h3>
       <h6>{profile.tagline}</h6>
       <div class="buttons">
       <Link to="/detailed-profile" state={{ profile }}>
         <button class="primary">
           View Details
         </button>
        </Link>
       </div>
      </div>
    );
```

```
}
}
```

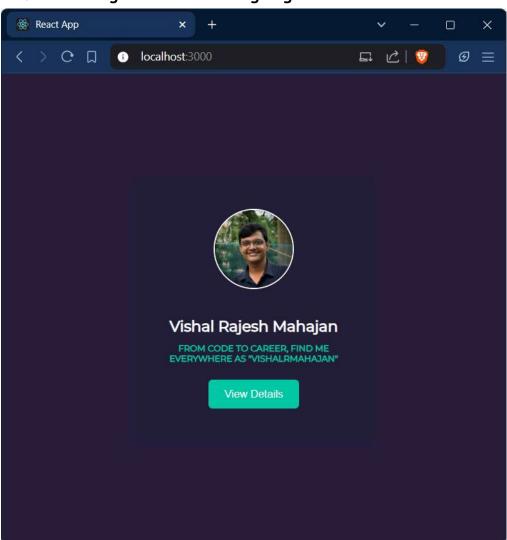

ProfileCard.css

```
@import url('https://fonts.googleapis.com/css?family=Montserrat');
  box-sizing: border-box;
body {
  background-color: #28223F;
 font-family: Montserrat, sans-serif;
 display: flex;
  align-items: center;
 justify-content: center;
  flex-direction: column;
 min-height: 100vh;
 margin: 0;
h3 {
 margin: 10px 0;
  color: #fff;
h6 {
 margin: 5px 0;
 text-transform: uppercase;
  color: #00C9A7;
h4 {
   margin: 5px 0;
    text-transform: uppercase;
```

```
color: #00C9A7;
 font-size: 14px;
 line-height: 21px;
 color: #fff;
.card-container {
 background-color: #231E39;
 border-radius: 5px;
 box-shadow: 0 4px 8px rgba(0, 0, 0, 0.1);
 overflow: hidden;
 width: 300px;
 text-align: center;
 padding: 20px;
 position: relative;
.round {
 width: 100px;
 height: 100px;
 border-radius: 50%;
 margin: 20px 0;
 object-fit: cover;
 border: 2px solid #fff;
.buttons {
 display: flex;
 justify-content: center;
 gap: 10px;
 margin: 20px 0;
.primary {
 background: #00C9A7;
 color: white;
```

```
border: none;
padding: 10px 20px;
border-radius: 5px;
cursor: pointer;
transition: background 0.3s;
}
.primary:hover {
  background: #00c9a752;
}
```

ProfileCard Page which is Landing Page:

Second webpage design is as shown in figure. Create it using react Class Component

DetailedCard.jsx

(This is where the data in Profile Card Class component will be Passed)

```
import React, { Component } from 'react';
import { useLocation } from 'react-router-dom';
import './DetailedProfile.css';
import { Link } from 'react-router-dom';
import { FaInstagramSquare } from 'react-icons/fa';
import { FaLinkedin } from 'react-icons/fa';
import {    FaGithub } from 'react-icons/fa';
class DetailedProfile extends Component {
  render() {
    const { profile } = this.props.location.state;
   return (
     <div class="card-container">
        <img class="round" src={profile.imageUrl} alt="user" />
        <h3>{profile.name}</h3>
        <h6>{profile.tagline}</h6>
        <div class="skills">
         <h6>Skills</h6>
            {profile.skills.map((skill, index) => (
             {skill}
            ))}
         </div>
        <div class="social">
          <h4>Connect with me</h4>
         <div class="social-icons">
            <a href="https://www.instagram.com/vishalrmahajan" target="_blank"</pre>
rel="noreferrer">
             <FaInstagramSquare size={32} color='white' />
```

```
</a>
            <a href="https://www.linkedin.com/in/vishalrmahajan" target=" blank"</pre>
rel="noreferrer">
              <FaLinkedin size={32} color='white' />
            <a href="https://www.github.com/vishalrmahajan" target="_blank"</pre>
rel="noreferrer">
              <FaGithub size={32} color='white' />
            </a>
          </div>
        </div>
        <Link to="/" state={{ profile }}>
          <button class="primary">
            Hide Details
          </button>
        </Link>
      </div>
    );
export default function DetailedProfileWrapper() {
  const location = useLocation();
  return <DetailedProfile location={location} />;
```

DetailedCard.css

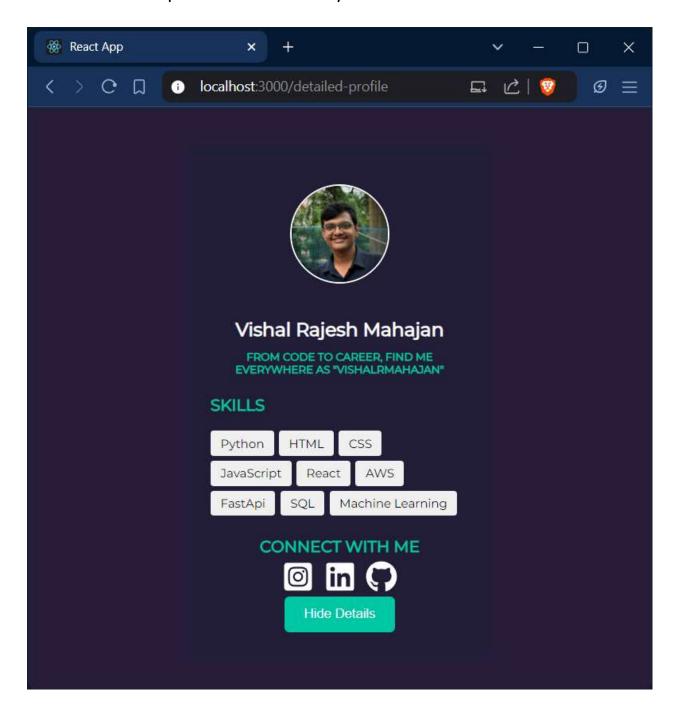

```
.social-icons {
   display: flex;
   justify-content: center;
   gap: 10px;
}
.skills {
   text-align: left;
   margin-top: 20px;
}
```

```
.skills h6 {
  font-size: 16px;
  color: #00C9A7;
  margin-bottom: 10px;
}

.skills ul {
  list-style: none;
  padding: 0;
}

.skills ul li {
  background: #f0f0f0;
  padding: 5px 10px;
  border-radius: 3px;
  margin-bottom: 5px;
  display: inline-block;
  margin-right: 5px;
  font-size: 12px;
}
```

DetailedCard Output that data directly from ProfileCard Class:

App.js (file where a Route is created using React-Router-dom)
